SMARTZONE FOOD INDUSTRY FOOTWEAR AND CLOTHING SYSTEM

Streamline your operation by using the Smartzone colour coding range and help prevent cross contamination.

Using colour effectively in a well-planned program helps improve food safety by preventing workers from mixing products that shouldn't be mixed, keeping pathogens or allergens from travelling from one part of the plant to another. Plus, colour helps organise procedures in the workplace, enabling workers to make decisions quickly and more accurately.

Colour supports safe, efficient waste disposal and helps reduce waste in general. In areas including transportation, inventory, motion, and loss of product, certain colours have become standard:

BLUE for seafood, RED for High risk, GREEN for produce, WHITE for finished food and YELLOW for hazardous areas. Orange is sometimes used for allergens.

This system will provide you with the perfect solution to the following challenges:

- Eliminates risk of Cross contamination
- Instant recognition from great distances
- Segregation of zones for hygiene
- Packaged goods versus goods in process
- Prevents transition of PPE between different zones – eliminate wastage.

Please contact your sales rep for info on lead times and quantities on all Smartzone products.
